

Loading Existing ZIP System™ Tape Guns with Liner-less Tape

New tape will easily work with existing tape guns

Liner-less tape works just fine with the existing ZIP System™ Tape guns. Because there is no liner to collect, you will simply bypass the collection spool on the tape gun (see attached photos).

Step 1: Install tape roll on unwind spool so the leading edge unwinds from the top left (counter-clockwise).

Picture 1. Loading tape roll on unwind spool

Step 2: Pull leading edge of tape underneath both the take-up spool and pressure roller.

Picture 2. Feed the tape under the take-up spool and pressure roller

Step 3: Pull tape gun to dispense. Pressure roller imprint (diamond pattern) should be observed on tape.
