

SPAN

Build cleaner, smarter homes for less

The SPAN smart electrical panel reduces your total build costs,
and enables the ultimate home energy management experience

'Make ready' made easy

SPAN PowerUp™ is an all-in-one solution that helps you stay compliant, unlock cost savings, and simplify your projects

Streamlined compliance

Building code continues to progress 'make ready' requirements (such as EVSE pre-wire, solar & battery storage-ready, or all-electric) which typically necessitate larger service sizes that can add significant upfront costs to projects.

Build smarter—not harder

SPAN is the only energy management system (EMS) that alleviates regulatory pressures and helps you provide a better homeowner experience in accordance with NEC 2023.

'PowerUp' your homes

SPAN PowerUp™ technology lets you build at any service size to stay compliant while avoiding time-consuming and costly additional electrical work.

Universal, fast EV charging for every home

SPAN Panel pairs with SPAN Drive EVSE to deliver level 2 fast charging during optimal times for homes on all service capacities.

Better whole-home backup

SPAN Panel is compatible with category-leading battery storage solutions to offer 40% longer backup without a critical loads panel that can also be paired with generators for extended duration.

Solar & storage project financing

Finance SPAN with leading solar companies like Sunrun or Sunnova as a part of any solar and storage project, and remove the electrical panel from your materials budget at no direct cost to your business.

We're expanding

The SPAN product family is expanding to meet the diverse needs of builders and their customers, with new SKUs available now for specifying.

Smarter energy that fits your process

SPAN effortlessly aligns with your current build schedule and trades

Create a homeowner experience that sets you apart. SPAN PowerUp™ technology enables whole-home battery back-up that lasts 40% longer on average than battery systems without SPAN.

SPAN PowerUp is an integrated feature in every SPAN Panel that automatically adjusts energy loads to keep homes from exceeding their service limits.

Add SPAN to your projects to reduce build costs without updating utility infrastructure, solve regulatory challenges, and grow your revenue by meeting market demand.

Integrated with leading home battery storage products to seamlessly enable the ultimate battery backup experience for your buyers.

Offer buyers cost-saving energy insights through the SPAN App without adding time or labor to the project.

about building with SPAN**

Differentiate your homes

Leverage whole-home energy savings in your marketing materials

SPAN Panel

Help your buyers save money

Visibility of energy usage at the circuit level and Amazon Alexa on/off scheduling helps homeowners make smarter decisions to save on energy bills.

Forward-feature capable

Freedom and flexibility in the future for additional appliances (e.g. pool equipment) without the need for costly electrical system upgrades.

Solar, storage, and EV-ready

Build homes that are prepared for any solar, storage or EV charging installations.

Traditional panel

No savings opportunities

No energy insights or actionable home data; no smartphone or tablet app dashboard.

Not forward-feature capable

Additional electrical service upgrade costs are incurred when adding new appliances to the home.

Electrical upsizing required

Offering EV charging, storage, and/or solar requires moving to a larger and more costly service size.

Build with SPAN today

The SPAN Builder Program is designed to meet the needs of custom and semi-custom home builders across the country.

Specifying SPAN on every project helps you manage new regulatory requirements and address market demands.
