

Switched Right™

*Congratulations on your new home!
Switched Right homes are more
affordable, personal, and sustainable.*

What You Get

Homes built with the Switched Right method give up-front sustainability savings. They conserve a significant amount of construction materials, greenhouse gas emissions, and time.

The result is a home where every switch has app-enabled convenience and energy-saving automations.

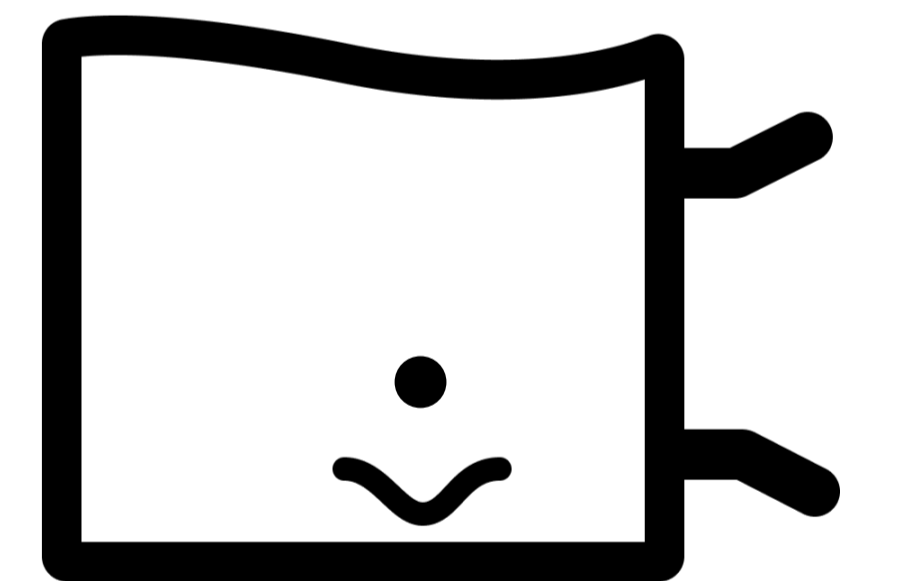

- ✓ Enjoy smart switches throughout your home
- ✓ Set energy-saving automations on all switches
- ✓ Use voice control assistants to turn on lights
- ✓ Designer, minimal screwless switch cover plates
- ✓ Personalize which devices a switch operates
- ✓ New feature drops and timely system updates

Quick Start Guide

Step 1

Locate your home's Q Gateway

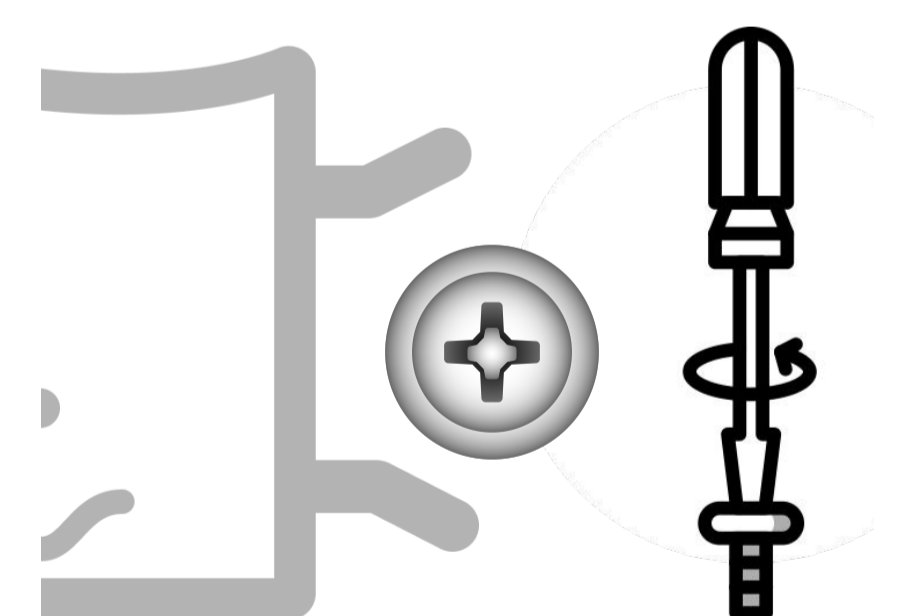

The Q Gateway should be mounted on its security bracket in one of three locations: next to your electrical panel, on a wall in your garage, or on a wall in your pantry.

Step 2

Unmount your Q Gateway from its security bracket

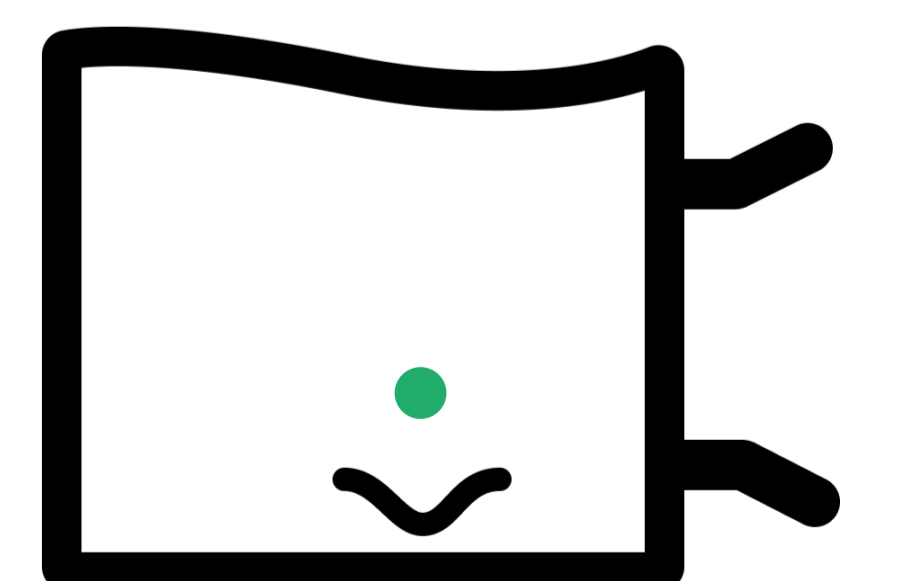

Remove the white screw cap on the right side of the Q Gateway. Use a Phillips-head screwdriver to remove the screw. Slide the Q Gateway to the right to finish unmounting it.

Step 3

Prepare your Q Gateway for app access

Power up the Q Gateway with the included power adapter. Connect it to your Wi-Fi router with the provided ethernet cable. Once energized, wait for the LED to turn solid GREEN.

Step 4

Download and connect to the Levven Controls app

Search "Levven Controls" on the app store or scan the QR code for direct links to the Apple App Store and Google Play Store listings.
